

SECUROPE ON HOT DECK

SECUROPE SUR BAC CHAUD
SECUROPE SOBRE HOT DECK
SECUROPE AUF WARM
Code N° ASSY SECU 005

June 2015

DESCRIPTION

A Hot Deck consists of a corrugated sheet covered by an insulating material and a membrane. The Multipost / Spotanchor attaches the life line to this surface securely. The dimensions of the corrugated sheet can vary according to national construction legislations but are generally as follows:

- Thickness of metal sheet: 0.75 to 1.25 mm.
- Height of the corrugated sheet covering from 30 to 165 mm
- The span of the corrugations may lie between 200 to 333 mm
- The insulation is generally rock wool with a thickness between 80 and 160 mm.
- The waterproof membrane is either bituminous, PVC, EPDM or TPO.
- The Multipost with 4 toggle bolts is used to fix the end anchors and the anchors in the curves.

The Spotanchors with 1 toggle bolt is used to fix intermediate anchors in straight section, see typical configuration on next page. The toggle bolts are made of zinc coated steel size M10 x 300 mm, and can withstand a traction force of 20 KN.

TECHNICAL SPECIFICATION

Delivered with an installer and user manual

Compliant with EN795 Type C
MADE IN EU

Test certificate n°AT6495104

Multipost base

Spotanchor base

Bituminous collar

A competent person will check the strength of the structure in relationship with forces transmitted by the end and intermediate anchors when a fall is stopped. Fallprotec makes software available, approved by Apave, which works out the forces in accordance with the site configuration and the number of users.
