12,2 mm

0,05 Kg

Code N°	Weight	Description	Availability
LDV074	0,05 kg	Anchoring eyeplate for M12 bolt SS316L	Available from stock

For installations ensure that concrete quality must be at least 25 MPa. Ensure that all equipment is in perfect operating conditions, that it is appropriate for the intended use and that all the elements and components are compatible with each other and comply with the rules, regulations and directives currently in place. Always check that any ropes used are compatible with the system: in fact, some ropes can slide more or less depending on different factors (sheath structure, surface treatments, inadequate diameter, wet or frozen ropes). Do not use a device for activities that exceed its limitations or for uses that are different to those intended!
